

ABSTRACT OF THE DISCLOSURE

An electronic apparatus comprises a housing having an outer plate, and a circuit board housed removably in the housing. A fixing part is provided on the outer plate of the housing. The fixing part has a holder piece located inside of the housing farther than the outer plate. A bracket is fixed to the circuit board. The bracket has a fitting piece. The fitting piece is held between the outer plate and the holder piece, when the circuit board is housed in the housing.
